AUDIOLOGY

The Big Three of Hearing-Aid Innovation

CLARITY

Enjoy clear, high-fidelity sound regardless of where you are. Clear sound helps reduce listening effort and boosts your confidence in any social situation.

We think the key benefit from increased clarity, however, is better brain health. Higher quality acoustic information gives your brain more of what it needs to reduce the risk of dementia. We call it sound for better thinking.

High-tech hearing aids are brain-health technology.

CHARGEABILITY

Convenient rechargeable batteries give you a full day of power with only three hours of charging. A 30-minute quick charge adds an extra 6 hours of power.*

- Worry-free rechargeability for more convenience
- No disposable batteries means less hassle and waste

*Features depend on the model.

COMPATIBILITY

Compatibility with smartphones offers you more ways to connect with your family, friends, and colleagues.

Now you can stream directly from your smartphone and TV, make convenient hands-free calls, and discreetly control your hearing aids from your smartphone.*

Better connections.

Better communication.
